

Dream'eo launches the first model in its new line of mobile digital entertainment platforms in Europe.

Dream'eo introduces the first new generation model of portable multimedia player based on its recent R&D efforts in portable electronics.

Powered by a 400 MHz Intel chipset and based on the Microsoft® Windows CE® platform, the Dream'eo PVP E320 is currently one of the most advanced mobile platforms. With a 20Gb hard disk and High-Speed USB 2.0 connection, the PVP E320 is an essential accessory for sharing audio and video files and preserving all critical data in one's professional and personal activities. Its 3.5 inch colour TFT screen is remarkably legible and fluid thanks to its 352 x 288 resolution at 30 f/s.

“We believe that thanks to the choices made a year ago during the product design phase, we are able to offer the market an extremely powerful, exceptionally versatile and completely ergonomic product” indicated Dr Hongbing Zhang, product designer and R&D General Manager. “The PVP E320 is the first sign of our determination to position Dream'eo as one of the leading players in the booming portable video market, a determination already shown by our technological and financial partnerships.”

The PVP E320 is offered at an attractive price of 499 € and available at the beginning of 2005 in the main consumer distribution channels: specialized retail stores and on-line resellers in particular.

A propos de Dream'eo

Dream'eo is a company specialized in supplying innovative digital entertainment products to the consumer market. Supported by its partnership with Microsoft for platform development and bolstered by its European network of experts, Dream'eo can offer products that meet the performance and compatibility needs of users of multimedia players.
